the configure I do How .PC a on FIFA play to controller Xbox my use to want I أذناه بالصورة أوضح كما هو موضح بالوصول فى العجزات فى الوصل كما هو موضح بالصورة أذناه I want to use my Xbox controller instead. How can I configure it? Can someone help me with the following? Can I use a wireless controller, with the same button layout as a wired controller, but work with the PC? I'm using Windows 8, if that helps. I tried a bluetooth keyboard, and it worked great, except when the Xbox controller goes in sleep mode. So I bought a USB adapter, to see if I could wake it up. Now it doesn't work at all, and I'm out of ideas. From what I can tell, it's not picking up the Xbox controller at all, and my Xbox controller doesn't work at all, if it's connected to the computer with the USB adapter. How can I configure a USB adapter, with no connection to the computer, so that the PC will wake up when the Xbox controller is connected? I've tried plugging in with no device attached, and nothing works. A: There are two parts to this. 1) The controller itself needs to know that it's on the computer and it's connected to the Xbox/Playstation network. 2) The controller needs to know what to do with the inputs and outputs. Microsoft state (1) is a requirement for 3rd party controllers (2) is not. To resolve this you will need to provide the Xbox/Playstation network with the drivers (1). 1) A Microsoft article on how to connect a Xbox controller and the PC 2) The fact that any 3rd party device is not supported by the system. 3) The fact that the driver is needed to enable the controller on the Xbox. This is a "common issue", as you mentioned. Most controllers have very specific requirements, and once you plug it in, the controller is basically "turned on", and the PC will recognize it's presence. What you have here is 82157476af
